

Chapter 5: Similarity
Lesson 5-3: Similar Triangles
Homework

Name: _____
Date: _____
Period: _____

Determine whether the following pairs of triangles are similar. If the triangles are similar then state the theorem or postulate. If not, then explain why not.

<p>1.</p> 	<p>2.</p> 	<p>3.</p> 
<p>4.</p> 	<p>5.</p> 	

Identify each statement as true or false. If false, state why.

- If the measures of the sides of one triangle are 5 times the measures of the sides of a second triangle, the two triangles are similar.
- If the measures of the sides of one triangle are $\frac{1}{2}$ the measures of the sides of a second triangle, the two triangles are similar.
- If two triangles share one angle in common, then the triangles are similar.
- If the measures of the sides of a triangle are each 3 in greater than the measures of the sides of a second triangle, then the triangles are similar.

10. Given $\triangle ABC \sim \triangle EFG$,
 $AB = 15$, $BC = 6$, and
 $EF = 5$, find FG .

11. In the figure, $MP = 12$, $OP = 16$, and $NP = 15$.
 What value for the measure of \overline{LP} would make
 $\triangle MNP$ similar to $\triangle OLP$?

12. In the quadrilateral ABCD,
 if AB is parallel to CD, then
 which triangles are similar?
 ($\triangle ABE$, $\triangle BCE$, $\triangle CDE$, or
 $\triangle DAE$)

13. If triangles STU and NOP are
 similar, then what is the ratio
 $\frac{TU}{OP}$?

14. Using the figures in problem 13 determine the ratio $\frac{NO}{ST}$.

15. Using the figures in problem 13 find the measures NO and OP.

16. Identify the similar triangles in the figure. Explain your answer.
